Easy to install with no on-site cutting or wastage the Pergola is a complete solution. Designed as both a car port or patio cover the Pergola product is pre-fabricated in 9 size options to provide a perfect solution for every customer. The unique curved Pergola beam is constructed from powder coated aluminium and acts as an integral gutter and support beam. Aluminium posts are part of the structural support package – these also fulfil the function of a rain water pipe.

- Pergola supplied unglazed - we will issue glass panel sizes.
- 6mm toughened glass for 0.6 snow load areas - all other areas use 10mm.
- One combi post/rainwater pipe per Pergola - position is always at left hand corner viewed from inside. Posts sit 'inboard' of each end by 200mm.
- 7.5° pitch
- Support posts are 2,900mm long and designed to be set between 2,100mm - 2,400mm from ground level to the underside of the beam - balance of the post length is below ground to allow for the provision of adequate support (min 500mm) - see disclaimer over page.
- Two colours / finishes - White (RAL 9003 80% Gloss) and Grey (RAL 7016, textured)

Job No.:3598

HOW TO PLACE AN ORDER FOR PERGOLA:

Upon placement of your Pergola order, an order confirmation is generated which must be signed and emailed back.

JOB REFERENCE ………………………………….

DISCLAIMER

The person ordering Pergola is responsible for checking that it will fit to the host property. Also, check ground condition and finishing/paving. Check the condition of the host wall and select appropriate structural fixings/anchors.

* Width = Length of curved front beam. Projection = host wall to centre of the support post. Prices include UK delivery but exclude glazing and VAT. Height at host wall with 2,400mm to underside of curved front beam at 2.5m projection is 2,935mm, at 3.0m projection is 3,000mm and with a 3.5m projection it is 3,066mm. At 2,100mm to underside of curved beam, deduct 400mm. We suggest you allow 100mm clearance on top of height dimension.
